PROJECTS

"Stop wasting your Heroku dyno hours" (Published on Medium, May 2023) Article published on Medium An article on my resource-optimization strategy for economically managing server hours without appearing broken

GETit (Built with Python, Docker, Flask, PostgreSQL, SQLAlchemy, JavaScript, React, Redux, HTML5, CSS3) Live Site | Github It's Reddit but for jokes. Get it?

- Designed and deployed efficient data storage and processing by thoroughly engineering a secure database in Python with a • SQLAlchemy ORM and Flask.
- Developed a single-page application by leveraging React functional component structure and client-side routing to render relevant • data onto the DOM, dependent on URL parameters.
- Harnessed the unidirectional state management of Redux to simplify React components and directly manage data with AJAX • requests when querying the PostgreSQL database for posts, comments, and votes.
- Implemented Docker to create maintainable containers to allow rapid deployment and portability of the application while still • ensuring a consistent runtime environment.

Wineaux (Python, Docker, Flask, PostgreSQL, SQLAlchemy, JavaScript, React, Redux, HTML5, CSS3) Live Site | Github A reviewing app for wine lovers inspired by Untappd

- Collaborated virtually with a team of four engineers serving as a flex-developer, worked on features such as user authentication and CRUD features for wine listings.
- Implemented a custom React modal to confirm deletions of any products allowing preventing unintentional destruction of data. •
- Applied Github best practices to prevent merging conflicts allowing for productive and collaborative teamwork. •

Kelp! (JavaScript, Express, PostgreSQL, Sequelize, React, Redux, HTML5, CSS3)

A Yelp-like recommendation app for seaweed-related businesses

- Built a secure user auth system, utilizing BCrypt to hash and salt passwords, strengthening data protection for the backend. •
- Designed a search feature using Redux, allowing users to find seaweed-related businesses by name.

EXPERIENCE

Choice Cabinetry LLC

Automations Engineer

- Configured 2020 Insight to enable sales order processing for 25+ product versions with near-infinite variability in sizes, finishes, ٠ and features, replacing hundreds of SKUs from the existing catalog, with minimal vendor training.
- Designed 15 base parametric CAD models in 2020 Construct, aligned to company-specific construction standards, enabling the • near-infinite variability of Insight's product versions, with Construct-focused vendor training.
- Integrated 2020 Insight with Construct to generate bills of materials for engineering processing, preparing for a proof-of-concept • deployment.
- Served as the sole in-house tech resource for IT support, solving issues from routine troubleshooting (e.g., printer connectivity) to • urgent forensic data recovery with TestDisk, restoring several months' accidentally deleted work to ensure operational continuity.
- Refined automation processes and software integrations, applying software engineering expertise to improve efficiency and • support adoption of complex tools.

Redners Warehouse Markets

General Merchandise Manager, Receiver, Self-Checkout Trainer, Inventory Control Specialist

EDUCATION

App Academy *Curriculum of Study in Web Development (JavaScript and Python)*

Yeshivas Ohr Somayach Bachelor of Talmudic Law

Tulane University Coursework in Engineering and Physics

Doylestown, Pennsylvania September 2011 – May 2015

San Francisco, California December 2021 – July 2022

Jerusalem, Israel August 2015 – September 2018

> New Orleans, Louisiana August 2007 - May 2009

Somerville, New Jersey

August 2024 – Present
